ReactJs + Javascript

I am a passionate and adaptable professional who enjoys creating amazing user experiences and tackling technical challenges. I have taught myself frontend development using JavaScript and Typescript with ReactJs, one of the most popular frameworks in the industry.

I also have skills in communication, audio-visual content creation, and project management. I am open-minded, detail-oriented, responsible, and confident. I can work either independently or in a team, meet deadlines, and I like to learn from others.
